Chemical Reaction Engineering-I						
COURSE OUTLINE						
Course	Chemical Reaction Engineering-I	Short	CRE-I	Course		
Title:		Title:		Code:		
Course description:						

This course applies the concepts of reaction rate, stoichiometry and equilibrium to the analysis of chemical reacting systems. It derives rate expressions from reaction mechanisms and equilibrium or steady state assumptions, design of chemical reactors via synthesis of chemical kinetics, mass and energy balances.

Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	3	14	42	3	

Prerequisite course(s):

Chemistry, Industrial Chemistry, Thermodynamics-I & II, Fluid Mechanics, Material and Energy Balance Computations.

Course objectives:

- 1. To become accustomed to the chemical reaction, rate of reaction, order, molecularity of reaction, rate constant, the activation energy and temperature dependency of rate equation.
- 2. To use methods for demonstrating the skill about analysis of constant volume batch reactor and variable volume batch reactor and the integral and differential method.
- 3. To interpret the ideal batch reactor, mixed flow reactor and plug flow reactor.
- 4. To understand about the reaction in parallel, series, Series parallel reaction and the optimum temperature progression for single reaction, Isothermal, adiabatic, non adiabatic operation.
- 5. To learn the residence time distribution of fluid in vessel and concepts of micro and macro mixing.

Course outcomes:

After successful completion of this course the student will be able to:

- 1. Understand the basic concepts of chemical reaction engineering.
- 2. Compare various reactors.
- 3. Understand the Optimum temperature progression for single reaction, Isothermal, adiabatic, non adiabatic operation.
- 4. Know the residence time distribution of fluid in vessel & concept of micro and macro mixing.
- 5. Identify related calculation and solutions to chemical reaction engineering problems for designing chemical reactors.

COURSE CONTENT						
Chemical Reaction Engineering-I		Semester:		`	V	
Teaching Scheme:		Examination scheme				
Lectures:	3 hour	s/week	End semester exam (ESE):60 marks			60 marks
			Duration of ESE:			03 hours
			Internal Sessional Exams		40 marks	
	(ISE):					
Unit–I: No. of Lectu		res: 09 Hours		Marks: 1	12	
Introduction to chemical reaction engineering: Review of chemical reaction equilibrium,						

Classification of chemical reaction, rate of reaction, order and molecularity of reaction, rate constant, Temperature dependent term of rate equation, comparison of theories, Activation energy and temperature dependency, rate of reaction predicted by theories, Reaction mechanism.

Unit–II:	No. of Lectures: 09 Hours	Marks: 12			
Collection & interpretation of kinetic data, Constant volume batch reactor, integral and					
differential method of analys	sis of data, Variable volume	batch reactor, integral and			
differential method of analysis of data, The search for rate equation.					

Unit–III:	No. of Lectures: 08 Hours	Marks: 12
T1 11 1 1 1 1 1 1 1 1	1 01	

Ideal batch reactor, mixed flow reactor, plug flow reactor, space time and space velocity, holding time and space time for batch, mixed and plug flow reactors, comparison in mixed and plug flow reactors, Combined flow system, Recycle reactor, Autocatalytic reaction.

Unit–IV:	No. of Lectures: 08 Hours	Marks: 12				
Introduction to multiple reactions: Reaction in parallel, Reaction in series, Series parallel						
reaction. Optimum temperature progression for single reaction, Isothermal, adiabatic, non						
adiabatic operation, Product distribution and temperature for multiple reactions.						

Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Residence time distribution of f	luid in vessel, Conversion direc	tly from tracer information,
Models for non-ideal flow, Disp	persion models, Tank in series n	nodel, Concept of micro and
macro mixing.		

Text Books:

- 1. Octave Levenspiel, Chemical Reaction Engineering, John Wiley and Sons.
- 2. H.Scott Fogler, Elements of Chemical Reaction Engineering, Prentice Hall New Jersey.

Homogeneous Catalysis: Introduction, Characterization of solution Processes, Examples of solution catalysis: Acid – base catalysis, Organometallic Catalysis. Heterogeneous Catalysis: Introduction, Characterization of Surface Processes, Properties of Solid Catalysts, Influence of Mass Transport on Catalyst Performance. Catalyst Components: Catalytically active species, Supports, Binders, Promoters. Unit–II: No. of Lectures: 08 Hours Marks: 12 Supported Catalysts: Introduction, Definition of Supported Catalysts. Advantages of Supported Catalysts: Separability, Cost, Catalyst activity, Catalyst Selectivity. Support Materials for the Catalyst, Composition, Size and Shape, Surface Area., Porosity and Pore size. Attrition Loss, Density, Cost and quality. Design and Development of Supported Catalysts: Preparation and Manufacture, Catalyst Preparation Methods, Catalysts from Physical Mixtures, Impregnated Catalysts, Ion exchange Catalysts. Testing and evaluation of Supported Catalysts, Application of Supported Catalysts. No. of Lectures: 09 Hours **Unit–III:** Marks: 12 **Regeneration of Catalysts:** Fluid Catalytic Cracking Unit: Process Description, Heat Balance, Coke formation, Coke burning, CO Combustion, Environmental aspects. Regenerator Operating Parameters. Influence of Regenerator design on Catalyst Fluidization, Equipment/Unit Operation in Cracking Units. Noble and Base Metal Catalysis: Noble Metal Catalysis, Deactivation, Regeneration, Regeneration Processes such as continuous Catalyst Regeneration, Fixed Bed Semi Regenerative Process, Cyclic or swing, Reactor for regeneration. Base Metal Catalysis: Process and Catalyst Description. Unit–IV: No. of Lectures: 08 Hours Marks: 12 Catalysis in Petroleum and Petrochemical Industries: Applications of zeolites in Petrochemical Refining. Improving quality of Petroleum fuels through Catalysis. O-xylene isomerization over Nickel containing SAPO-5 molecular sieves. Pd-sulfonated Polysiloxane catalyst for etherification of FCC light gasoline. Oxidation of Ethylbenzene catalyzed by Soluble Cobalt (III) complexes. Comparative evaluation of various catalysts used for removal of NO_x from air streams. Unit–V: No. of Lectures: 08 Hours Marks: 12 Biocatalysts: Introduction and importance of biocatalysts. Type of biocatalysts. Enzymes: Definition, Sources of Enzymes, production of Enzymes. Formation of enzyme substrate complex. Applications. Simple enzyme kinetics. Derivation of Michaelis Menten equation. Evaluation of parameters of Michaelis Menten equation. Effect of Temperature and pH on enzyme Kinetics. Microbial Cell: Classification of cells. Requirement for the growth of cells and growth Media. **Text Book:** 1. Bhattacharya KG and Talukdar A K, Catalysis in Petroleum and Petrochemical Industries. Narosa Publishing House, New Delhi.

2. James E. Bailey and David F. Ollis, Biochemical Engineering Fundamentals; McGraw Hill Publication.

Unit–II:	No. of Lectures: 08 Hours	Marks: 12				
Molecular weight & degree of polymerization, Significance of molecular weight of polymer						
Average molecular weight and	molecular weight distribution	in polymers, measurements of				
number, average by Cryosco	py; Ebulliometry, Membran	e osmometry, Vapor pressure				
osmometry and End group ana	lysis. Measurement of viscosit	y, average molecular weight by				
viscometry.						

	Unit–III: No. of Lectures: 09 Hours	Marks: 12	
--	-------------------------------------	-----------	--

Glass transition temperature, Factors influencing glass transition temperature, Glass transition temperature & molecular weight, Glass transition temperatures & plasticizers. Thermal analysis of polymer by differential scattering calorimeter; TGA, TMA and HDT. Mechanical properties like tensile strength, Young's Modulus, hardness, etc.

	Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Polymer	processing& technic	ques, Compounding, Calendar	ring, Die casting, Rotational
casting,	Film casting, Inje	ction moulding, Blow mou	lding, Extrusion moulding,
Thermofe	orming, Foaming.		

Unit–V:	No. of Lectures: 08	Hours	Marks: 12	
Properties, applications and ma	anufacturing techniques	of Polyeth	ylene, Polypropylene	e, PVC,
Phenol formaldehyde, Urea	formaldehyde, Epoxy	polymers,	Styrene-Butadiene	rubber
(SBR), Nylon-6, 6, Viscose Ra	yon.

	Open Elective Course – I						
Biochemical Engineering							
	COURSE OUTL	INE					
Course	Biochemical Engineering	Short	BCE	Course			
Title:	5 5						
Course	description:						

The course consists of study of Biological Material & Energy Balances for bioprocesses & unit operations used in the bioprocesses. It also includes Enzyme Engineering. Immobilization of enzymes and kinetic study of the enzyme catalyzed reactions. Study of microbial kinetics, various models, different types of Bioreactors with material balances are the integral part of this course. Sterilization reactors, air sterilization, O_2 transport in bioprocesses, recovery of the fermentation products followed by instrumentation and control are also included in the course.

Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3

Prerequisite course(s):

Thermodynamics-I and II, Fluid Mechanics, Material and Energy Balance Computations.

Course objectives:

1. To know about the biological materials to obtain various chemicals from them and Energy and Material balances for the bioprocesses and Unit operations involved in these processes.

- 2. To learn Enzyme Engineering.
- 3. To accustom with kinetics of microbial growth, various models and different reactor configurations for the growth of microorganisms.
- 4. To understand sterilization of liquids and air, O₂ transport through cell and determination of oxygen transfer coefficients.
- 5. To introduce the unit operations for the recovery of fermentation products and the application of controls and instrumentations in bioprocesses.

Course outcomes:

After successful completion of this course the student will be able to:

- 1. Apply a knowledge and understanding of various biochemical processes for the recovery of many important chemicals and biochemical's.
- 2. Utilize the principles of hygiene.
- 3. Demonstrate the understanding of basic science and engineering.
- 4. Use the knowledge of chemical engineering to design efficient product bioprocesses by designing bioreactors and effective downstream processing mechanism.
- 5. Understand the environmental issues and to provide solutions for green and clean technologies.

students. The proj		•		-	0	0 1		-	

shall complete the partial work, and by the end of Semester – VI the students shall complete remaining part of the project. Assessment for the project shall also include presentation by the students. Each teacher can guide maximum 04groupsofminor projects.

The students should take project work, as specified in the curriculum, based on the knowledge acquired by the students during the degree course till Semester – IV. The project may be either fully theoretical / practical or involving both theoretical and practical work to be assigned by the Department. The work may also be Study / Survey / Design.

Minor Project (Stage – I) may involve literature survey, problem identification, design methodology, collection of data etc. The project work shall involve sufficient work so that students get acquainted with different aspects of design and analysis. Approximately more than 50% work should be completed by the end of Semester – V. Each student group should submit partial project report in the form of thermal bound at the end of Semester –V.

Each student group is required to maintain separate log book for documenting various activities of the project.

Suggestive outline for the partial project report is as follows.

Abstract

Chapter 1. Introduction

Chapter 2. Literature Survey

Chapter 3. Methodology

Chapter 4. Results & Discussion

Chapter 5. Conclusion

Bibliography

Appendix

Guide lines for ICA:

The Internal Continuous Assessment (ICA) for project shall be based on continuous evaluation of students' performance, active participation, knowledge / skill acquired throughout semester and presentation by the students. The assessment shall be done jointly by the guide and departmental committee. A three-member departmental committee including guide, appointed by Head of the department, shall be constituted for the assessment. The assessment for Minor Project (stage – I) in Semester – V shall be as per the guidelines given in Table – A.

Constitution of India

Basic features and fundamental principles

The Constitution of India is the supreme law of India. Parliament of India cannot make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" – a modern and progressive concept historically developed by the thinkers of "liberalism" – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of "constitutionalism" in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of "diversity". It has been said that Indian constitution reflects ideals of its freedom movement; however, few critics have argued that it does not truly incorporate our ancient legal heritage and cultural values. No law can be "static" and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India have played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it "as one of the strongest court in the world".

Course content

- 1. Meaning of the constitution law and constitutionalism
- 2. Historical perspective of the Constitution of India
- 3. Salient features and characteristics of the Constitution of India
- 4. Scheme of the fundamental rights
- 5. The scheme of the Fundamental Duties and its legal status
- 6. The Directive Principles of State Policy Its importance and implementation
- 7. Federal structure and distribution of legislative and financial powers between the Union and the States

8. Parliamentary Form of Government in India – The constitution powers and status of the President of India

- 9. Amendment of the Constitutional Powers and Procedure
- 10. The historical perspectives of the constitutional amendments in India
- 11. Emergency Provisions: National Emergency, President Rule, Financial Emergency
- 12. Local Self Government Constitutional Scheme in India
- 13. Scheme of the Fundamental Right to Equality
- 14. Scheme of the Fundamental Right to certain Freedom under Article 19
- 15. Scope of the Right to Life and Personal Liberty under Article 21

Oil Technology COURSE OUTLINE Course description: The purpose of this course is to expose students to the oils and fats methods used in industrier and research. This course prepares the student to take up such challenges in his profession and understand important principles and present economic principles and their applications in the field of Chemical Engineering and Technology Lecture Hours/week No. of weeks Total hours Semester credits 3 14 42 3			Profes	sional Elective Co	urse – Il	[
Course Title: Oil Technology Title: Short Title: OIT Course Code: Course description: Course of this course is to expose students to the oils and fats methods used in industries and research. This course prepares the student to take up such challenges in his profession and understand important principles and present economic principles and their applications in the field of Chemical Engineering and Technology Lecture Hours/week No. of weeks Total hours Semester credits 3 14 42 3 Prerequisite course(s): Thermodynamics-I and II, Fluid Mechanics Material and Energy Balance Computations, Mass Transfer-I, Chemical Reaction Engineering-I. To introduce concepts of importance of oils, fats and waxes and learn scales of production various oils and its plant capacity. To accurse adjectives: 1. To introduce concepts of importance of oils, fats and waxes and learn scales of production various oils and its plant capacity. To analyze various analysis of oils, scaps and detergents. 5. To apply methods of vegetable oil refining and the byproducts from refining. 4. To analyze various analysis of oils, scaps and detergents. 6. To astimate optimum time and utility for production and provide the safety during processes. Exhibit heir ability to identify, formulate, and solve engineering problems during productions. 2. Capable of applying their process engineering knowledge by allocating resources to obtair maximum productivity. <t< th=""><th></th><th></th><th></th><th></th><th></th><th></th><th></th><th></th></t<>

1. To introduce concepts of importance of oils, fats and waxes and learn scales of production various oils and its plant capacity. 2. To accustom with presence of adulteration in other vegetable oils and factors affecting solvent extraction plant and VOR. 3. To apply methods of vegetable oil refining and the byproducts from refining. 4. To analyze various analysis of oils, soaps and detergents. 5. To estimate optimum time and utility for production and provide the safety during processes. Course outcomes: After successful completion of this course the student will be able to: 1. Understand the various factors responsible for establishing a chemical industry such as SEP, VOR, Soap & detergent industries. 2. Capable of applying their process engineering knowledge by allocating resources to obtair maximum productivity. 3. Exhibit their ability to identify, formulate, and solve engineering problems during productions. 4. Designing the product to meet economical and societal requirements. 5. Demonstrate the understanding of professional and ethical responsibilities. Unit–I:	No. of Lectures: 09 Hours	Marks: 12

Hydrogen: The freedom fuel

Introduction, history of hydrogen, properties of hydrogen, production of hydrogen, on board storage of hydrogen, material compatibility for hydrogen, stationary storage for hydrogen, piping for hydrogen, dispensers for hydrogen, transportation of hydrogen, advantages and disadvantages of hydrogen, hazard of hydrogen, safety system for hydrogen, standards for hydrogen, hydrogen use in IC and SI engine, hydrogen used in CI engine, hydrogen combustion, emission from hydrogen, blend of hydrogen with CNG (Hythane / HCNG), hydrogen for fuel cells, review of hydrogen vehicle worldwide, hydrogen economy, hydrogen in India.

Unit–II:	No. of Lectures: 09 Hours	Marks: 12
Compressed Natural Gas (CNG	()	

Introduction, history of CNG, production of CNG, properties of CNG, CNG storage, piping for CNG, advantage and disadvantages of CNG, CNG dispensing system, CNG transportation, material compatibility for CNG, CNG fuel kits, engine modification for CNG operation, CNG combustion, stoichiometric Vs lean burn CNG engines, CNG engines optimization, vehicle emission from CNG, aftertreatment of CNG exhaust, CNG fuelling station safety system CNG, standards and regulations, third party inspection for alternative fuels vehicles, CNG vehicle worldwide, CNG scenario in India

Unit–III:	No. of Lectures: 08 Hours	Marks: 12					
Biodiesel							
Introduction, history of biodies	Introduction, history of biodiesel, biodiesel feedstock selection, raw materials for biodiesel						
production, biodiesel product	ion, properties of biodiesel,	biodiesel storage, biodiesel					
dispensing, biodiesel material	dispensing, biodiesel material compatibility, biodiesel standards, biodiesel transportation,						
6	-	el, second generation biodiesel,					
engine modification for biod	iesel, biodiesel emission, bio	odiesel combustion, biodiesel					
vehicles, biodiesel senior in Ind	ia						

	Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
`	TT 7 1		

Producer gas or Wood gas

Introduction, history of producer gas, composition of producer gas, properties of producer gas, production of producer gas, theory of gasification, advantages of producer gas, hazards of producer gas, application of producer gas, emission from producer gas, producer gas engine, producer gas vehicle, producer gas in India

Unit–V:	No. of Lectures: 08 Hours	Marks: 12
A		

Ammonia

Introduction, history of ammonia as a fuel, properties of ammonia, ammonia in nature, health hazards of ammonia, ammonia as an automotive fuel, ZAP ammonia car, ammonia as a carrier for hydrogen, ammonia for stationary engine applications, ammonia on-board storage, ammonia for fuel cell vehicles, ammonia fuel cells for locomotives Liquid nitrogen

Introduction, history of LN2 to as a fuel,: the Boese engine, LN2 car at the University of

North Texas, LN2 car at the University of Washington(UW), thermodynamic analysis of LN2 car at UW, liquid nitrogen economy

ſ

Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Composting-theory of compo	sting, types of composting, fa	actors governing composting,
Design of mechanical Compo	sting plant, Recovery of Bio G	as energy from organic solid
waste, Vermi composting.		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Incineration, Necessity, Appl	ications, Theory, Types of inc	einerators. Location, planning
aspect. Effect of feed, composi	tion, rate and temperature, Air su	apply. Concept of 3R.
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Pyrolysis and it's by product	ts, Air Pollution due to incine	eration. Status of solid waste
management in India. Cost eco	nomics of solid waste managem	ent, Thermal power plant solid
waste- reuse and disposal, Hos	pital solid waste collection and d	isposal, Market waste.
Text Books:

- 3. Determination of HTU, HETP and NTU.
- 4. Ternary Diagram: To construct ternary diagram for given system.

#### 5. Tie Lines.

- 6. Liquid Liquid Extraction: To study and determine the efficiency of cross current liquidliquid extraction.
- 7. Spray Column.
- 8. Leaching: To calculate efficiency of cross current leaching operation.
- 9. Adsorption: To study adsorption of acetic acid on activated charcoal.
- 10. Ion Exchange.

#### **Text Books:**

- 1. Coulson & Richardson Chemical Engineering (Vol. II), Butterworth-Heinmann (Elsevier) (Fifth Edition).
- 2. Designed Standard College Laboratory Manual and Instruction Manuals of the Laboratory Equipment Suppliers.

#### **Reference Book:**

- 1. To study the reaction of solid liquid system for an instantaneous reaction for benzoic acid NaOH and calculate the enhancement factor.
- 2. To study the isothermal decomposition of ethyl alcohol in tubular reactor packed with activated alumina catalyst.
- 3. To improve the % purity of commercially used ethanol using reactive distillation.

- 4. To improve the % purity of commercially used ethanol using extractive distillation.
- 5. To carry out the catalytic reaction to convert the nitrobenzene to aniline in presence of iron filling / HCl catalyst in the reactor.
- 6. To study the reaction of liquid-liquid system for butyl acetate NaOH and to calculate the enhancement factor.
- 7. Absorption to study the reaction of liquid gas system for NaOH CO2 to determine rate of absorption.
- 8. Adsorption to study the adsorption of Acetic Acid on charcoal.
- 9. Preparation of Butyl Acetate by Reactive Esterification.

#### **Text Books:**

- 1. Octave Levenspiel, Chemical Reaction Engineering, John Wiley and Sons.
- 2. Designed Standard College Laboratory Manual and Instruction Manuals of the Laboratory Equipment Suppliers.

#### **Reference Book:**

H. Scott Fogler, Elements of Chemical Reaction Engineering, Prentice Hall New Jersey.

#### **Guide lines for ICA:**

Internal Continuous Assessment shall be based on continuous evaluation of Student performance throughout semester and practical / assignments submitted by the student in the form of journal.

#### **Guidelines for ESE:**

End Semester Examination shall be based on practical / oral evaluation of Student performance and practical / assignments submitted by the student in the form of journal.

The Minor Project, in continuation with Minor Project (Stage – I) at Semester – V, by the end of Semester – VI, the student should complete implementation of ideas as formulated in Minor Project (Stage – I).

The project may be either fully theoretical / practical or involving both theoretical and practical work to be assigned by the Department. The work may also be Study / Survey / Design. Each student group should submit complete project report at the end of Semester-VI in the form of Hard bound. Assessment for the project shall also include presentation by the students.

Each student group is required to maintain separate log book for documenting various activities of the project.

Suggestive outline for the complete project report is as follows.

Abstract

Chapter 1. Introduction

**Chapter 2. Literature Survey** 

**Chapter 3. Methodology** 

Chapter 4. Results & Discussion

**Chapter 5. Conclusion**

Appendix

#### Guide lines for ICA:

The Internal Continuous Assessment (ICA) for project shall be based on continuous evaluation of students' performance, active participation, knowledge / skill acquired throughout semester and presentation by the students. The assessment shall be done jointly by the guide and departmental committee. A three-member departmental committee including guide, appointed by Head of the department, shall be constituted for the assessment. The assessment for Minor Project in Semester – VI shall be as per the guidelines given in Table – B.

				Ta	ble – B				
		As	ssessment by	Guide		Assessm	artmental		
		Committee							
Sr	Nam	Attenda	Implement	Resu	Rep	Depth of	Presenta	Demonstr	Tot
	e of	nce /	ation	lts	ort	Understan	tion	ation	al
Ν	the	Participa				ding			
0.	Stud	tion				_			
	ent								
	Marks	5	5	5	5	10	10	10	50
Guid	lelines f	for ESE:							
In E	End Sei	mester Exa	amination (E	SE), th	ne stud	lent may b	e asked f	for presenta	tion /

In End Semester Examination (ESE), the student may be asked for presentation / demonstration and questions on Project. Evaluation will be based on answers given by students in oral examination.

#### Internship

Internship is a mandatory and non-credit course. It is mandatory for all admitted students to undergo Internship during the degree course. The course shall be of THREE weeks duration during summer vacation after Semester - VI. Following are the intended objectives of internship training:

- Will expose Technical students to the industrial environment, which cannot be simulated in the classroom and hence creating competent professionals for the industry.
- Provide possible opportunities to learn understand and sharpen the real time technical / managerial skills required at the job.
- Exposure to the current technological developments relevant to the subject area of training.
- Experience gained from the 'Industrial Internship' will be used in classroom discussions.
- Create conditions conducive to quest for knowledge and its applicability on the job.

Students shall choose to undergo Internship / Innovation / Entrepreneurship related activities for Internship. Students shall choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations / Micro / Small / Medium enterprises / academic institutions / research institutions. In case student want to pursue their family business and don't want to undergo internship, a declaration by a parent may be submitted directly to the Department Head / TPO.

During the last year of FOUR year Bachelor of Engineering course the student should take project work, as specified in the curriculum, based on the knowledge acquired by the student during the degree course and during Internship. The project work provides an opportunity to build a system based on area where the student likes to acquire specialized skills. The work may also be on specified task or project assigned to the student during Internship.

The internship activities and list of sub-activities for Internship are as under.

- Innovation / Entrepreneurship:
  - Participation in innovation related Competitions for eg. Hackathons Robocon, Baha, IIT Tech Fest, Chemcon, Dipex etc
  - o Development of new product/ Business Plan/ registration of start-up
  - Participation in Entrepreneurship Program of THREE weeks duration
  - Online certification courses by SWAYAM, NPTEL, and QEEE etc.
  - Working for consultancy/ research project within the institutes
  - Training on Software (As per the need of respective branch);
  - Field Survey / Case Study
  - Work experience at family business
- Internship:
  - Internship with Industry /Govt. / NGO/ PSU/ Any Micro/ Small/ Medium enterprise/ academic institutions / research institutions
  - Online Internship
- Rural Internship
  - Any Long Term Goals may be carried out by students in teams:
    - Prepare and implement plan to create local job opportunities.

- Prepare and implement plan to improve education quality in village.
- Prepare an actionable DPR for doubling the village Income.
- Developing Sustainable Water Management system.
- Prepare and improve a plan to improve health parameters of villagers.
- Developing and implementing of Low Cost Sanitation facilities.
- Prepare and implement plan to promote Local Tourism through Innovative Approaches.
- Implement/Develop Technology solutions which will improve quality of life.
- Prepare and implement solution for energy conservation.
- Prepare and implement plan to Skill village youth and provide employment.
- Develop localized techniques for Reduction in construction Cost.
- Prepare and implement plan of sustainable growth of village.
- Setting of Information imparting club for women leading to contribution in social and economic issues.
- Developing and managing efficient garbage disposable system.
- Contribution to any national level initiative of Government of India. For eg. Digital India/ Skill India/ Swachh Bharat Internship etc.

Faculty Mentor/Supervisors have to play active roles during the internship and minimum 20 students are to be supervised by each faculty mentor or as per the departmental strength. Mentor shall be responsible for selection of Internship activities by the student under his/her supervision and shall avoid repetition of activities by the student. The college / Institute shall facilitate internship for the students.

Every student is required to prepare a file for Internship containing documentary proofs (daily training diary, comprehensive report and completion certificate) of the activities done by him/her. The students should record in the daily training diary the day to day account of the observations, impressions, information gathered and suggestions given, if any. It should contain the sketches & drawings related to the observations made by the students. The daily training diary should include Date, Time of Arrival, Time of Departure, Main points of the day. The daily training diary should be signed after every day by the supervisor/ in charge of the section where the student has been working.

After completion of Internship, the student should prepare a comprehensive report to indicate what he / she has observed and learnt in the training period. The report should include Internship Objectives (in measurable terms), Internship Activities, and Internship Outcome.

The completion certificate should be signed by the supervisor / in charge of the section where the student has been working with performance remark as Satisfactory / Good / Excellent.

The evaluation of Internship shall be in Semester – VII. The evaluation shall be done by expert committee constituted by the concerned department including Department Head/ TPO/ faculty mentor or guide. It should be evaluated on the basis of the following criteria:

- Regularity in maintenance of the diary.
- Adequacy & quality of information recorded.
- Originality.
- Adequacy and purposeful write-up.
  - Syllabus for Third Year Engineering (Chemical Engineering) w.e.f. 2020 21

- Practical applications, relationships with basic theory and concepts taught in the course.
- Skill / knowledge acquired

Hence the satisfactory completion of Internship shall be submitted to the university at the end of Semester - VIII of FOUR year Bachelor of Engineering course. Only after successfully completion of Internship, Internship should be printed in the final year mark sheet as COMPLETED.
